Directions to figure cash value when policy is on 802M (extended term)

1. Figure age person would be at the time X-T would expire.
2. Go to that age on the printout.
3. Figure number of years left on X-T
4. Find that corresponding year on printout for that age(see #1)
5. Go to cash value column. If there are days, subtract higher cash value from lower cash value and divide by 365(number of days in year), then multiply number of days remaining.
6. Multiply by volume.
